It is a shame to see that the citations to the references is to be incomplete. It has been a while since I have even talked to all you lovely people in this community, I'm on a bit of a hiatus. I can only blame my own lack of self discipline and desire to play video games for so long. But now, I've been free of that for quite a while. So I figured it was time for me to get back to the community and hopefully help others. I will be posting some videos and stuff here to as I have time to, so if you see anything you think I should try and play, tell me! I just got my new PC this weekend and have been loving it so far. It is truly an amazing piece of technology, and I am so glad it is mine! So when I finished up playing my main game, Warframe, I wanted to take some time to relax, have fun and play some RTS games. I started with the Command and Conquer remake, Red Alert 3. I must say that I am not as good as I was when I first started playing the original game. I played a lot of the original when I was younger, but I feel as though my skill set is way higher now. I found myself playing on 'Easy' because I was so intimidated by the game's difficulty, but I eventually learned how to beat it on my own. I am not much of an RTS player, but I found this game just as fun to play as the original. I enjoyed the humorous scenarios, like when you first load up the game, and see the title 'Ye Hotty And Busty Techie'. Overall it is a good game, but the game's style is very repetitive. You play a different mission with a different base/hero every time you play, until you get to one where you play the exact same mission where you have to defend your base against wave after wave of enemy units. You really need to get used to this kind of game if you plan on beating the game because it never lets you actually relax while playing. Another challenge I found was that the AI was almost non-existent. It was so hard to tell when or if the AI was controlling units, and they just seemed to run up to your units without any thought in mind. Because of this, I found that when I would play on the easy mode, and I would say 'Come on AI turn left, AI turn left', you would always have at least one

30 Sep 2015 The special issue by Kumar and Singh of Automatica 2012 includes the.. is eluted using a voltage of 1.5 kV and the dialysate by using 0.75 M phosphate buffer (pH 5) at a flow rate of 60 .
